

# Current Known Issues as of 2.21.2012

---

## Site Manager

1. Mobile Change Appearance>Advanced Customizations Code Editor does not load a list of the default mobile styles. *This will be added before release.*
2. In IE9 & Safari, the Advanced Customizations tab will load a text box, not the Code Editor. *It does not currently support in these browsers.*
3. Associated mobile apps when deleted in app manager may not actually be removed.

*/\* this has been resolved for the winter release\*/*

## Mobile Device

No known issues at this time.
